USA CN third party re publication 10/7/24

Dr. Jack Kruse is a neurosurgeon and advocate for decentralized medicine. Often at odds with mainstream medical practices, he challenges established norms and promotes a holistic approach to healthcare. In this captivating talk, Dr. Jack Kruse, a neurosurgeon known for his unconventional views, discusses his experiences and thought-provoking topics on medicine and technology. Sharing anecdotes from his career, Dr. Kruse delves into topics like vaccine safety, autism, and the influence of MK Ultra and CIA experiments on modern technology. He emphasizes the importance of decentralized medicine and medical freedom to protect public health and individual liberties.

0:09

um you heard my name I'm Jack Cruz I'm a neurosurgeon um one of my clients and

0:16

friends you guys may know asked me to come here and kind of

0:21

give you Lowdown about last three or four days what I've kind of been through

0:26

and that's the only slide in my talk

0:32

um I've had an interesting last seven eight months I've been deplatformed in

0:39

centralized medicine for the better part of 20 years um I'm the black sheep of

0:48

centralized medicine he's the black sheep of the Kennedy family and Rick is

0:55

the black sheep in the music business because if any of you know his history he founded hipop  
while he was studying

1:02

to be a lawyer at NYU and completely changed the music industry the difference is the middle

1:09

Black Sheep has become a cultural icon so he cannot be cancelled and he happens to be also a

1:16

patient and a a client of mine so I did

1:21

a talk in El salador that um was kind of interesting

1:28

in August and the person uh who decided to set me up to

1:37

how shall we say meet Bobby Kennedy is someone that you guys probably

1:43

know um probably the most famous technology company in the

1:48

world he him and his wife got divorced and they have an autistic kid and she wanted to hire me to reverse the kids

1:57

autism um she offered me \$100 million to build a decentralized

2:03

hospital and I told her I'd only consider something like that if it was done on my terms and you

2:10

know when you deal with somebody who has \$9 billion generally they don't like that but I told her it couldn't happen

2:16

in the United States it's impossible um so long story short she

2:22

says well I would like to get you with Bobby Kennedy most of you guys know and

2:29

or proba have preconceived notions you know of what he is or what he's not but

2:35

she obviously wanted to get us together to talk about vaccines because she believes that the vaccine schedule in

2:41

the United States had a big deal to do with her daughter's

2:47

autism and I told her I know certain terms that I'd love to meet with Bobby but that

2:54

wasn't really what I wanted to talk to Bobby about um

3:00

the lady in question uh probably caused her child's autism she's a patent attorney for

3:08

Google and the reason that all your computer screens are blue lit the reason

3:14

none of them are red lit the reason none of them pay attention to circadian biology is

3:20

because that original technology was developed in a government

3:25

program that Bobby Kennedy knows about and I happen to know about because I went to Medical school at LSU for those

3:32

of you who've never heard about Operation Paperclip and MK Ultra you think it's all conspiracy

3:39

theory so I'll ask you guys a question before we start what's the difference

3:45

between fact and fiction to you anybody want to scream it

3:51

out fiction has to make sense the truth does it in fact the

3:57

truth that's why people call it conspiracy theory because it makes no sense until you see all the parts come

4:02

together so at two-lane neurology and two-lane neurosurgery in the 50s and 60s and 70s and 80s the CIA started a

4:11

program there where they would do all these crazy things to monkeys and what the goal was back then the CIA wanted to

4:17

see how they could control things utilizing different things like drugs and things like that where the

4:23

neurosurgeons got involved which is M clade we would drill H the tops of the

4:29

heads off put wires into the thalamus put electricity in there and kind of see

4:34

what kind of Behavioral changes we could have one of the guys that was in that program was a guy named Professor

4:40

Delgado he got the idea to take it in a bigger animal when he saw that we could

4:46

control the behavior with the wired device he said what if we do it wirelessly so he checked it in monkeys

4:53

and checked it in bows and it turned out you can do it wirelessly with RFID chips

4:58

and semiconductor then the CIA took it to the next level they said well since this is

5:05

electromagnetic radiation and they be get done wirelessly what if we did it through light through

5:12

screens and it turns out you can and that's the reason why all your computer

5:20

screens have the frequencies they have so why is this all important well the

5:26

person that set this meeting up between me and Bobby is the patent attorney that

5:31

made sure that Google and meta have those things so they can control the things that we all do where did the

5:38

original idea come from that started off in MK Ultra with the CIA you're going to

5:44

be surprised when you hear this came from the mafia in Las Vegas they wanted

5:50

to build a new city in a desert they enclosed it all bled out the windows

5:56

invented slot machines that were blue lit and they found out that they didn't have to take a gun stick it in your face

6:02

to steal your money then they even got smart they said let's give people free alcohol while they're doing that and

6:08

they found out they got the money quicker and that's when the CIA got the idea to start this program that's really

6:15

how it started so for those of you in the room you probably know a little bit

6:20

about Bobby Kennedy I just told you a little bit about technology I told you a little bit about the CIA and I told you

6:25

a little bit about the mafia on no November 22nd

6:32

1963 his uncle was killed in Dallas Texas at that day that's the day that I

6:39

would tell you as an old guy because I'm probably the oldest guy at this conference that's when the heart of

6:44

America was taken out couple years later five years later

6:49

Martin Luther King and Bobby Kennedy's daddy were killed uh and that's when the mind and

6:56

the soul of the United States was removed so one of the first questions I asked

7:02

Bobby in this podcast and just so you guys know this podcast was done two days ago it's not out you're going to hear

7:10

some things of why I wanted to talk to Bobby that is probably going to affect

7:15

some of you and I'll ask a question before I tell you this story I'm sure none of you will tell me the truth but

7:22

how many took the MRNA vaccines anybody want to raise a

7:28

hand okay okay good this story is going to be really interesting to you

7:35

so I did my residency at LSU and in the 90s we used to take care

7:42

of brain tumors and different things like that and down in the basement we had a linear accelerator linear

7:47

accelerator is something that is involved in nuclear physics this hospital that I was in was a small

7:53

little wispy hospital so I finally asked a question why in the hell do we have aund million doll machine in this

7:59

hospital that clearly can't afford it and it turns out the story was that the

8:05

CIA bought this linear accelerator because of the programs that I mentioned to you at tane the name of this hospital

8:12

is called Ashner Medical Foundation I did two years on my residency there Dr Ashner Alon Ashner is is and was Dr

8:21

fouchy 1.0 Okay the reason why most of you

8:26

don't know about him is tied to the reason why his dad

8:31

and his uncle got killed okay so the CIA hired Dr Ashner and Dr

8:39

Ashner was the first head of the N National Cancer Society I want you to remember that's important fact in the

8:46

story I'm going to give to you in the

8:52

1950s the focus was on polio and the reason it was on polio is cuz our

8:58

president FDR got it he was succumbing to it he's going to die he had a famous

9:03

lawyer friend in New York who started the March of Dimes you probably heard that it was actually collecting dimes

9:10

all that research to Jonah sulk and his vaccine have you ever wondered anybody

9:15

in the room why Jonah sulk never won a Nobel Prize there's a reason it's called the

9:20

cutter event and you may not know about the cutter vent the reason why it's been scrubbed from the anals of medicine it's

9:26

also been scrubbed from medical textbooks it's also scrubbed from the FDA website but see I'm an old guy I trained

9:33

at a time before cancer culture and I learned about this in medical school

9:38

basically what they did Jonas Suk was tied to a pharmaceutical company called

9:44

cutter Pharmaceuticals and this is remember 1951 we didn't discover DNA until

9:49

1953 with Watson and cck they used African green monkeys to grow the polio

9:55

virus on to make the vaccine the vaccine was made and it was ready to be tested

10:02

in 1950 and 1951 at the same time a researcher named

10:07

Dr Bernice Eddie who you probably also don't know because she was really the

10:13

first doctor that was cancelled um she did some testing on the cutter vaccine before it was given to

10:20

humans and she injected it into monkeys and every single monkey got

10:25

polio she sent that information back to the people FDA and they were like

10:30

there's no way we we cannot stop this roll out this caused a big stir Dr

10:36

Ashner who is running this program with the help of the federal government he

10:41

actually worked for the FBI and the CIA at this time uh was so adamant that he

10:48

took his grandchild female and male in the amp theater of two-lane uh medical school

10:56

down on Carolton Avenue in New Orleans placed that I did my residenc yet I've been in this Ampitheater multiple times

11:04

and he injected both of his grandchildren his grandchild the male died in two days and the granddaughter

11:12

got a mild version of polio it was at that time that people

11:18

realized there was a big problem but the bigger problem came when Bernice Eddie started to look into this

11:26

she found out that there was multip viruses that were grown in the polio

11:32

vaccine that went out and 120 million people in the world from 51 through

11:39

about 55 and 56 got this the one that you guys may have heard of because it's been in the

11:46

news a lot something called sv40 what does SV stand for semi EnV virus 40 that

11:53

tells you there was 39 others but semi and virus 40 is important and African

11:58

green monkeys have this virus in them it is uh in them doesn't bother them at all

12:04

they don't get any problems but when you take sv40 out of any African green monkey and put in any other animal they

12:11

always get soft tissue cancers 100% guaranteed so Dr Ashner as I told you

12:18

was the first National Cancer Society president he began to realize very

12:25

quickly from 51 through 55 that there was going to be a huge cancer

12:31

outbreak in the next 40 50 years his best friend politically at that time was

12:38

a California politician you may have heard of named Richard Nixon and Richard Nixon is when he became president in

12:45

1971 uh started the war on cancer the reason why is because they knew what the cause of this problem

12:52

was so what happened the original goal of Dr

12:59

Ashner was to try to figure out a way to solve this problem that he in fact

13:04

caused by rolling out the polio vaccine so the linear accelerator was brought by

13:12

the CIA and placed in a place called a US public health hospital and this is

13:19

across the street from Children's Hospital in New Orleans on Henry Clay Boulevard why do I know all this cuz I

13:25

did my residency there right across the street is this big three-story building

13:31

that just sticks out like a sore thumb and the outside of this place is kind of like the outside walls that you've seen

13:38

in this building that we're having this talk and it looks like a military installation at the same time a lady

13:45

named Sarah Stewart who went to the University of Chicago she was an expert in viruses causing cancer at a time

13:53

nobody believed it she was kind of like the black sheep of her day like I'm the black sheep of mind

13:59

today and she was recruited by Dr Ashner at that time she was reassigned from the

14:06

NIH to the US public health hospital and at the same time an orthopedic surgeon

14:12

named Mary Stewart they're not related but they went to medical school together she was an expert in nuclear physics she

14:20

also was an expert in bone cancer to this very day her stuff is still cited

14:25

they both were brought to asra Medical Foundation and then covert research was begun what

14:32

was the goal they tried to cure the cancer they caused but instead they

14:37

found something interesting every time they used electromagnetic radiation on

14:43

sv40 I remember this is before they knew anything about DNA they found that the cancers got

14:50

worse and worse and worse in fact instead of getting it better they made

14:55

it worse and the reason now in modern molecular biology we know X radiation or

15:01

high energy particles breaks DN up into low pieces okay so they created a bunch of little

15:07

pieces so 1959 comes along Bernice Eddie is at a New York Academy science meeting

15:16

and drops the bomb in front of an audience just like this people that knew

15:22

about what was going on in the with the polio vaccine but they didn't know that the polio vaccine had sv40 in

15:29

it she decided to out it to the public because she felt what was going

15:35

on behind the scenes was kind of dly and you'll find in centralized medicine this happens quite often not just about

15:42

vaccines about a lot of other things like cholesterol and heart disease and neurod degeneration but that's not what

15:48

this talk is about so the next step that happens in

15:53

1959 Fidel Castro has a revolution in Cuba he takes the island over all of the

16:01

guys that were most pissed off were guys in the uh the mob they lost all their

16:06

casinos other people that were pissed off guys like Dr as who don't like can

16:12

uh Communists the reason why is Dr asner's Hospital even when I was a resident there used to have all the

16:19

flags of Central American and South American countries because he took care of all the dictators around the world he

16:26

was also very Ultra right conservative it's the reason why he was friends with

16:31

Nixon and Ronald Reagan and um he was not really a big fan of

16:38

Kennedy so the idea Came Upon what do we do with this problem so just like any

16:45

good politician always use a tragedy for your benefit they decided to make a

16:50

bioweapon out of the Poo vaccine and they used the linac to do it now what we

16:56

know today and we didn't know then is that electromagnetic radiation creates an increased rate of the way

17:03

this DNA is taken up into a virus that's the way that they knew that they were creating a stronger and stronger virus

17:11

so what did the CIA want to do they wanted to put it in tobacco and deliver it to Fidel Castro to kill him if they

17:18

couldn't do that they wanted to inject him with something so they had to have a plan to get somebody into the country to

17:25

inject them and that's where Lee Harvey Oswald came in to the story any of you

17:30

and many of you may not know the story cuz you're so young but Lee Harvey Oswald was given the opportunity in the

17:37

50s to defect to Russia and come back to the United States very easily is kind of

17:42

the craziest story ever but it was a front story so that Fidel Castro would not think that Lee Harvey Oswald was a

17:49

CIA agent so that way he could be the person to deliver the payload when time

17:54

came when it was ready so now we're in in the

17:59

1960s 1962 we have the Bay of Pigs Bay of Pigs is when his uncle

18:07

um did not give any Air Force protection in the Bay of Pigs and one of the

18:13

airline pilots who is a disgraced Eastern Airlines pilot named David Ferry

18:19

got shot down he became really anti anti- Kennedy at the

18:25

same time Dr Ashner actually hired him too so he worked on the

18:31

team with these two other famous cancer researchers just a a disgraced

18:38

pilot because they needed bodies to run an off-site program to continue to

18:43

strengthen this bioweapon then they found a young girl 18 years old who won

18:49

a science award in Florida Bradon Florida names Judith very Baker she uh started to work on viruses

18:57

as cause a can cancer back in the 1960s which is very very unusual and Dr ason

19:03

recruited her promised her if you if he worked or she worked in his lab that she would get Advanced standing in two-lane

19:10

medical school and and become a doctor very quickly so that's the the group of

19:15

characters we have in 1963 the summer of

19:21

1963 the experiments continued and they made a bioweapon uh the day before

19:28

Martin Luther King's I Have a Dream speech Lee Harvey Oswald Clay Shaw and

19:33

uh David Ferry um went to Clinton Louisiana where Dr Ashner directed uh

19:42

Angola death row inmate to go to a mental hospital in in

19:47

Jackson where David Ferry injected this toxic soup to see if it would

19:54

work okay and this shows you the level of Ethics that we're going on at this time Judith FY Baker had to come back to

20:01

the hospital two weeks later the gentle to confirm that he got cancer which he did he died four weeks later uh the

20:09

reason why this is a big story any of you watched Oliver Stone's JFK movie you'll note that the only person that

20:16

was ever prosecuted for John F Kennedy's death was Klay Shaw and the reason why

20:22

he was prosecuted why he was linked to this the prosecuting attorney was Jim Garrison Jim Garrison's daughter

20:28

Virginia Garrison was my ER nurse my intern year in my residency that's how I

20:34

know a lot of this data so what happens next is Garrison puts

20:42

Clay Shaw on trial the trial is unsuccessful but the reason the trial was unsuccessful is Dr Asher is like a

20:48

rock star in New Orleans and Garrison knew that he had the goods on him but he didn't go after them that was probably a

20:56

big mistake he decides to go after David Ferry next

21:01

Who's the disgraced pilot I told you about he's a very weird guy but

21:06

um David Ferry winds up dead the next day they find him in his apartment and

21:13

interestingly enough they find a document kind of like this with all

21:18

these scientific things and it's got different chapters and it's all about cancer causing viruses from

21:25

monkeys and Garrison had the Smoking Gun but he had no proof at all Judith very

21:32

Baker was shuttled off to Florida after all this and then the craziest part of the story is Mary Stewart the famous

21:39

cancer researcher in an accident at that US public health hospital grabbed a a

21:46

stick to turn a machine off and incinerated her whole right arm her thorax her face funny thing is she

21:54

wasn't found at the hospital she was found in her bed on Magazine Street in

21:59

New Orleans by a smoldering mattress Theory this is 6 months after JFK is

22:05

killed what's the reason for all this because they have to hide what they were

22:11

doing in this private lab that was the last link that would

22:17

link you back to Dr fouchy 1.0 effectively after the bad

22:24

prosecution of Clay Shaw everything was lost to science the interesting part was all the things that

22:32

they did because Mary Stewart's house was scrubbed of all her medical belongings they couldn't find anything

22:39

somebody finally started to ask the question where did all the monkey virus go turns out my anesthesiologist

22:47

when I was a resident his name is uh Dr rippel his dad ran the jks lab yks Lab

22:54

in New Orleans is a place that we used to do the operations on the monkey monkeys and we do peripheral nerve surgery I actually worked in this lab in

23:02

the in the '90s but this stuff was going on in that lab for Mk Ultra and all the other stuff in

23:10

the 60s and the 50s everybody knew about it so Peta the people that don't like

23:17

you eating animals when I was a resident they broke in to our lab let the monkeys go and I

23:24

was quoted in the paper saying something in New Orleans ever since that time I've had a lot of trouble with um activists

23:34

fora so much trouble that I told earlier today even didn't know this by Googling

23:39

me about 12 years ago when 3700 people were supposed to come hear me talk on a cruise ship uh somebody from Peta said

23:47

that I was bring a biologic weapon on the cruise ship and the FBI came in and

23:53

ransacked the cruise ransacked me took me off the cruise ship they wouldn't let

23:58

me back on even though 3,700 people came to see me why because people knew that I knew some

24:05

stuff that I probably shouldn't know and didn't want anybody to talk about it

24:11

so the chain of events with this monkey virus gets transferred in

24:18

1964 to the Delta primate Center in Covington Louisiana where they do

24:23

Primate Research under the direction of the Department of the military the dod this place has been open since then

24:31

Dr riel's Dad ran that place and the reason I became aware of that is because

24:37

the day that I was in the times picky un talking about it I asked Dr rippel about this issue I said look I

24:44

know your dad used to work there CU he would never talk about what his dad was involved with but he did that day when I

24:51

was getting ready to do a cran onomy in the middle of the night and some of the things that he told me made me start

24:57

asking questions I started putting things together and I said I need to find out

25:04

what happened with that monkey virus so it turns out 1971 the monkey virus

25:10

research went to Fort Dietrich if any of you see the black sheep of the Kenny family up there he

25:16

just wrote the takedown book for Dr Anthony fouchy in that book you'll see

25:21

all the links to Fort Dietrich from 1971 all the way up to the patriarch when

25:26

they knocked the Twin Towers all of our biologic weapon stuff was done in the United States  
ironically

25:35

several viruses got out when Obama was present Obama shut down the bioweapons

25:40

program and guess what he told Dr foui to do go offshore and guess where he

25:47

went Wuhan so gain a function research

25:53

continued now is one of my members okay

25:59

he pays me to make sure that I'm protecting him and his family on July

26:06

4th 2020 I had a 100 members at my house I told them there'll be no American

26:12

flag and I'm going to tell you two things we're going to talk about two things decentralized medicine  
and

26:19

decentralized money I said make sure you buy Bitcoin at the time it was about 78 Grand I said but  
make sure when they

26:26

come out with this vaccine that you never take it and I warned them

26:32

then we're talking 3 years ago that I think there's a pretty good chance that you're going to find out in a messenger

26:38

RNA vaccine we're going to find DNA plasmas that are not supposed to be

26:43

there and we're probably also going to find out that sv40 is contaminating the

26:49

viruses I want want you to remember this timeline I never talked about this

26:54

publicly ever why cuz I'm a little bit smarter than probably I am right

27:01

now um the virus comes out you guys can have

27:07

whatever ideology you feel about it I think you probably know what mine is but

27:13

the real story breaks about two months ago two months ago and you should write

27:19

this name down because you can need to follow him on Twitter his name is Kevin mckernan he worked on the Human Genome

27:26

Project for Craig ventner so he's got serious chops in molecular biology and

27:32

um he now works in the Cannabis industry and he decided to take fizer's

27:39

vials and test them for those DNA plasmas and the sv40 and guess what he

27:45

found they're in there so of course you can imagine when he post this on Twitter

27:50

all the wackadoodles that you know are prox wanted to bury him so one of those

27:56

wackadoodles also a very accomplished molecular biage at the University of South Carolina named Philip buckolz

28:03

second name you want to write down and follow their Twitter account he did the testing four weeks ago and

28:11

confirmed that finding so now most of you while you've

28:17

been Herzing and drinking and partying you didn't know that the vaccine really

28:24

was adulterated and guess what needed Bobby Kennedy and I had a inkling

28:31

that I was right so I called my friend Rick Ruben because remember he's the the black

28:38

sheep that is not canable because he's an awesome dude and everybody likes his

28:43

music I said Rick if we do this it's got to be you because when this information

28:50

comes out I think there's going to be a lot of pissed off people they're going to be

28:55

really really upset so to put this whole thing together for

29:02

you guys because I really want to make sure you understand why this is decentralized at its

29:08

core what's the game it's not the game that you hear on Twitter that people are

29:14

doing this to depopulate no they're doing exactly the opposite they want a lot of you to be their slaves to get

29:20

soft tissue cancers the reason why what's the number one profit Center centralized medicine in United States

29:27

cancer we make more money off cancer than anything else so what happens and

29:32

you know can back me up on this he's the financial guy how do you launder money

29:38

you need a big pile of money and when you want to keep running

29:43

Wars like Hamas like I don't know

29:49

Ukraine uh you know war is expensive and you have to rehypothecate money to run

29:55

those games and I know most of you Urban guys I found this out today I didn't know most of you are actually Bitcoin

30:02

Maxis like me but don't you find it kind of interesting that in the last two or three weeks that all of a sudden now

30:10

we're going to get a spot Bitcoin ETF why so they can rehypothecate the 3

30:15

million coins that are left on bitcoin and we all know what's been going on with TLT in the bond

30:23

market so through this whole story in August where some of you may have met me

30:28

I was in El Salvador uh this guy keeps coming up he calls me

30:35

up and says Jack I got a bunch of wackadoodle guys down in El Salvador but

30:41

I want you to come and give him a talk and I think somebody from the

30:47

president's Administration might be in attendance and you might be able to get your

30:52

decentralized medicine ideas in front of them so long story short I went there I

30:59

was probably the lightning bolt for the whole conference cuz I went after everybody who spoke and I was the last

31:05

guy and I basically made the case that there's lots of things that we should be

31:11

able to do in El Salvador because it is fully decentralized but number the number one thing is that I said that we

31:17

should have a medical Freedom law in the Constitution so for some of you who are

31:23

there you know who was there from the Buell Administration what you don't know

31:28

is when I left mazada 5 and 1 half hours later I wrote

31:33

the medical Freedom law for the constitution of El Salvador for those of you who don't know

31:40

medicine that's Benjamin Rush original signer of the Declaration of Independence in the Constitution who

31:46

petitioned John Adams and Thomas Jefferson to put this law in our

31:52

Constitution and they could not Envision at any time that this would ever happen

31:59

so it never got put in so most of you are bitcoiners every single time we talk

32:06

about Bitcoin don't we sit down and say let's talk about angles of attack how we get and this and that well guess

32:12

what the politicians in Washington DC and the CIA and the FBI have been doing the same thing how can we attack the US

32:22

Constitution and do it so the obedient idiot voters give two flying shits well

32:27

guess what turns out it was medical tyranny how did it start well we started the war on cancer with Nixon and Dr

32:35

Asner that was real successful because it started to create huge amounts of money we started putting up places like

32:41

MD Anderson and Sloan Kettering and cancer just kept growing and growing and

32:46

growing everybody else had everything scrubbed Along Comes Ronald Reagan who

32:53

just so you know in part of the Kennedy assassination which you can read about in two

32:59

books that I'll tell you about later he was part and parcel of this

33:06

situation and he agreed to step down so that Nixon could be the president first

33:11

but what did President Reagan do first big thing he created a law called the B

33:19

by the by Dole act in 1980 that allows researchers to profit off their research

33:27

that was when the fuse was lit what happens in 1982 Ronald Reagan puts Dr

33:33

fouchy in charge then what happens uh Dr fouchi after the Patriot

33:41

Act when the CIA and FBI realized that you can't do bioweapons research in the

33:46

United States because the way the laws are written in it was an act of treason and you could be hung so what did they

33:53

do they made Dr fouchy the most expensive employ in US Federal history

33:58

more than the president he makes \$50,000 more than the US president and he was in

34:05

charge of all the stuff that was at Fort district and that's when he started to

34:11

put it in the Ukraine and he started to put it in China

34:18

okay he had a good friend named Peter deac at North Carolina Eco Health

34:24

Alliance these were the guys that designed the messenger

34:29

RNA so I knew about all this in

34:34

2018 19 this is why I warn My Tribe never

34:40

never comply most of you don't know who I am you can go to my Twitter feed right now and there's a little box there it

34:47

says do not comply when they tell you to do something run

34:53

away now the real bad news if you took the jab you got some risks but I didn't

35:00

come here to talk to you about that I came to tell you when I sat down with

35:06

Bobby Kennedy we talked about all of this and it's all filmed and it's on

35:12

tape you are the first human beings to hear this story I've never told anybody

35:19

this live some of my friends but not all the parts but I told Bobby and Bobby

35:25

confirmed a lot of things that you just heard here that's the real reason I wanted to talk to

35:31

Bobby and Bobby Kennedy told

35:36

me that he thinks he has a plan to solve it I'm going to be quite honest with you

35:41

it's probably the only negative thing you're going to hear me say about him I don't think his plan's going to work and

35:48

I've told the people down in El Salvador that there's only one way to stop this like if you don't want history to keep

35:55

repeating itself with this issue you have to have a medical freedoms act so

36:01

when I left maada I wrote the law in five and a half hours and I sent it to the buchelli

36:06

administration the buchelli administration told me in 24 to 46 hours

36:13

I need to be ready to go meet the president of El Salvador guess what I did met him in his

36:21

house he said tell me the story My brother said that you had some very

36:27

interesting to say but I want to hear why you wrote what you wrote so I told

36:32

him the story of Benjamin Rush told him the story about why his uncle why his

36:38

dad and why they're probably going to kill him and why they want you to get cancer

36:46

it's a decentralized medicine story I've done my due

36:52

diligence this is the law in my hand I cannot let you read it but let you know

36:58

that it's here but I am going to read the first part Public Health Freedom Act of

37:06

2023 the people of El Salvador do enact as follows unless we put decentralized

37:13

medical Freedom into the Constitution the time will come when centralized institutions in  
healthcare will organize

37:19

into an underground covert authoritarian bureaucracy it will restrict the Art and

37:24

Science of healing to one class of people and deny privileges to others it will constitute the bastille  
of Medical

37:31

Science all such laws are contrary to freedom and liberty they are despotic and have no

37:38

place at a constitutional republic the constitution of the Republic should make special privileges  
for medical freedom

37:44

and religious freedoms related to the practice of healing therefore these laws should be added to our founding

37:50

documents to protect the public health from tyranny from this day

37:55

forward

38:02

I can tell you that it's not pass yet but I can tell you on pretty firm

38:07

Authority it's going to be and all I want to say to all of

38:15

you do not trust anybody anybody who's

38:21

centralized I have an absolute disdain in my heart for centralized medicine

38:27

cuz I know what they're capable of you need to realize that too you need

38:32

to realize that things that are centralized at their core have fundamental weakness and flaws and you

38:39

need to think about that you think about you need to think about the way you do things there's things that are going to

38:44

be especially the poor people of Europe they're not going to be able to get

38:50

out these policies these are not just these are run by people you need to run

38:57

away from Bill Gates wants to block the sun you block the sun you set this off

39:04

not to scare the hell out of all of you but the devices in your pocket the devices you use are capable of making

39:11

smaller DNA plasmas and smaller fragments of sv40 so if you're a heavy Tech abuser

39:17

and you got the shot my advice is come visit me in El Salvador because you're going to need the Sun so that you don't

39:24

get soft tissue cancers and just to follow this up how did I

39:30

track all this and be very quiet about it for three years but warn my members

39:35

there's a gentleman on Twitter named the ethical skeptic write it down he's a

39:40

former Navy's intelligence officer who's been tracking the data and has been

39:46

publishing since the first month the vaccines were given there's a huge spike

39:52

in deaths not associated with covid deaths not associated with complications

39:58

of the vaccine it was something else everybody ignored him for almost 2 and a

40:04

half years the day that Kevin mckernan who's our modern day Bernice Eddie he's

40:11

the one that told the world now it's been confirmed by the other side this is no longer hyperbole this is

40:20

no longer conjection this is reality and you need to know that you

40:26

need to live in places that protect your freedom not take it

40:32

away that's the purpose of this I'm hoping to build that in El

40:39

Salvador where I think Freedom Reigns and I will tell you what Bobby told me I sent Bobby the law I had to get

40:45

clearance from the buelli administration because it's not passed I sent Bobby the law about two

40:51

weeks ago he called me up and we talked for almost 2 hours hours on the phone

40:57

and he said Jack no American politician can pass this I want all of you Americans out there let that

41:04

sink in that's how dysfunctional this country is that they're not even willing to save

41:11

us that's some he even told me and I told William this before this talk that he

41:17

said not even Ronda santis in Florida could get this law passed that's how

41:24

restrictive I've made it like this is a no law he did tell me though

41:31

because Rick moderated I asked I said Bobby could you pass pieces and parts

41:38

and he he had his healthc care attorney his name is Aaron Siri called me up I

41:44

spoke to Aaron and Aaron told me that we

41:49

we obviously would love to get pieces and parts of this in in our platform he goes but it's it's almost nuclear in the

41:57

United States because of how big farmer controls the lobbyist but this is what he did say and I shared this today with

42:05

several of my friends in this room he said Jack if El Salvador passes

42:10

us and buelli passes us they are one of one they're the unicorn and you most of you know that a

42:18

lot of people call buelli a dictator he's given his people medical freedom and money now he's going to give them

42:24

medical freedom for healthcare and he plans on doing medical

42:30

freedom for the internet too all in the next six s months so I want you to know what your

42:38

risks are I don't want you ever to come to me and say you didn't tell us I'm

42:44

here two days after that picture made it happen that's the only

42:51

reason I'm here
